

PPD® Laboratories FSP brings the experience of our industry-leading labs to your next project no matter where you need it.

More than ever, pharmaceutical and biotech companies need service models designed to provide flexibility, improve utilization of resources and accelerate timelines without sacrificing quality. In addition, the complexity of today’s pharmaceutical development, regulatory expectations and rapid evolution of technology demand that laboratory scientists and support staff stay at the forefront of these changes to maintain a leading edge.

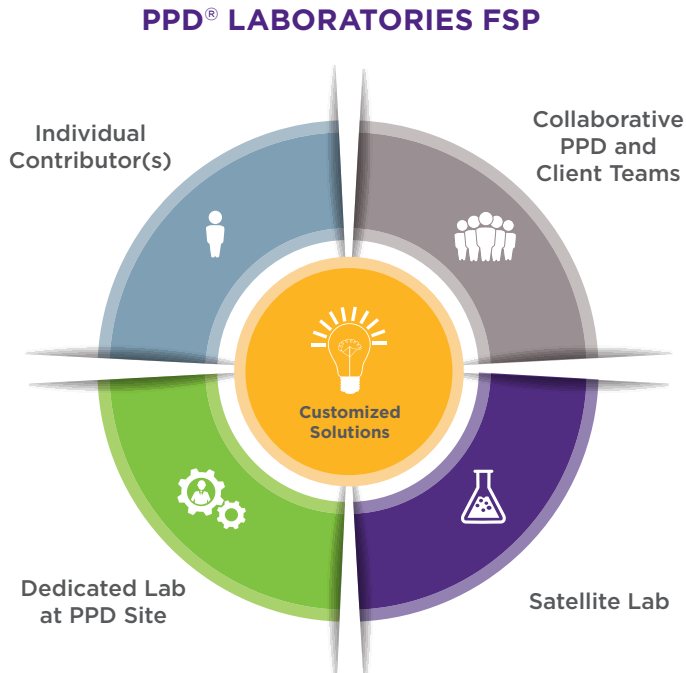

**OUR INNOVATIVE APPROACH**

PPD Laboratories FSP (functional service partnerships) is aimed at helping you increase productivity and shorten timelines. We hire full-time PPD Laboratories employees, not temporary staff. This staffing model ensures quality results and provides consistency through the course of your program. In addition, our full-time employee (FTE) approach eliminates issues associated with temporary staffing limitations, reduces turnover and enhances integration with your teams.

To assist with effectively meeting project milestones, PPD Laboratories offers staffing solutions that deliver highly skilled laboratory scientists, project team members and support staff based on your specific program needs. Working in individual positions or as teams, our staff are trained in your processes. They are fully functional and valuable extensions of your permanent staff.

PPD Laboratories FSP can:

- + Leverage the experience of a dedicated pharmaceutical development laboratory without the investment
- + Eliminate the need to ship samples or transfer data
- + Simplify communications, with on-site troubleshooting handled face-to-face, in real time
- + Better integrate scientific expertise and operational capabilities
- + Improve resource utilization and drive process efficiencies

# PPD® Laboratories FSP

Complex pharmaceutical development projects require innovative approaches that go beyond traditional full-time, in-house employees or hourly, temporary workforce options to address laboratory staffing and functional challenges.

## OUR INNOVATIVE SOLUTIONS INCLUDE:

- + Individual contributors working at your site
- + Dedicated lab personnel and/or space located at one or more of PPD Laboratories' global locations
- + Satellite lab—personnel, instrumentation and lab space—run by PPD Laboratories on or near your campus leveraging decades of PPD expertise in efficient, high-quality laboratory operations
- + A mixture of PPD and client teams with space on yours, ours or both campuses

## SOLUTIONS TAILORED TO YOUR NEEDS

PPD Laboratories was the first to offer alternative resource solutions in the CRO laboratory space. We continue to deliver innovation to our clients through our collaborative approach.

Our 20 years of experience has shown us that one size does not fit all when it comes to pharmaceutical development. We will work with you to design an FSP solution that meets your business goals and the unique needs of your program. Whether the need is individual contributors, an entire team of scientists, a satellite PPD lab within your facility or a dedicated lab at one of our campuses, you will get the highest commitment to customer service and data quality.

---

PPD Laboratories FSP delivers the highly trained scientists, project team members and support staff you need, where you need them and when you need them—all backed by more than 20 years of regulated lab expertise and the experience of a world-class CRO.

---

## SOLUTIONS BEYOND STAFFING

For comprehensive FSP solutions that create either a satellite or dedicated lab/team, we provide personnel oversight, employee training/development and day-to-day team management designed to maintain our industry-leading reputation for high-quality data and regulatory compliance.
